

CPU/RAM Guide

Made by: loxxk#7777 (dm 4 questions)
.gg/iku

Prerequisites:

Executor (preferably KRNL/Fluxus)

(the reason why I do not like Synapse is because it adds 200Mb upon injection and high cpu usage).

Roblox Background Killer:

<https://cdn.discordapp.com/attachments/927988311237226497/1014036491636330496/CloseRobloxBGProcess.bat>

Process Lasso: <https://bitsum.com/>

Mem Reduct:

<https://github.com/henrypp/memreduct/releases/download/v.3.3.5/memreduct-3.3.5-setup.exe>

Battle Encoder Shirase: <https://mion.yosei.fi/BES/>

Optional: (NOT INCLUDED AS STEPS!)

Bloatware Killer:

download: <https://github.com/builtbybel/bloatbox/releases>

tutorial: <https://youtu.be/7SdtxrsZN8k>

Reduce CPU Usage: https://youtu.be/TL2PRJMt_Sk

IF YOU HAVE PREVIOUSLY FOLLOWED MY GUIDE, SKIP STEPS (1-2)

Step 1 (Process Lasso):

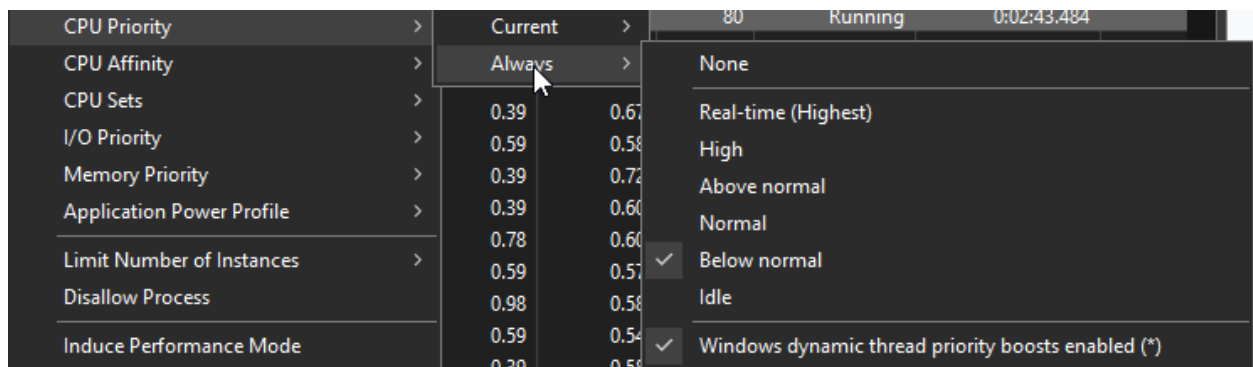

In Process Lasso, we are pretty much setting Roblox to be in the “Lowest Priority” for your computer to operate, theoretically decreasing CPU usage.

First, find the RobloxPlayerBeta.exe (NOT LAUNCHER!!):

Process name	User	PID	PreBalance time	Rules	Priority class	CPU affinity	CPU sets	CPU (%)	CPU avg	Threads	Status	CPU time
RobloxPlayerBeta.exe [32]	ryanf	15068		iiBp0-7M1	Below normal*	0-7		0.59	0.55	80	Running	0:02:40.281
RobloxPlayerBeta.exe [32]	ryanf	4900		iiBp0-7M1	Below normal*	0-7		0.39	0.57	80	Running	0:02:46.968
RobloxPlayerBeta.exe [32]	ryanf	15604		iiBp0-7M1	Below normal*	0-7		0.59	0.56	80	Running	0:02:42.171
RobloxPlayerBeta.exe [32]	ryanf	22536		iiBp0-7M1	Below normal*	0-7		0.78	0.67	80	Running	0:03:15.296
RobloxPlayerBeta.exe [32]	ryanf	23148		iiBp0-7M1	Below normal*	0-7		0.39	0.58	80	Running	0:02:49.921
RobloxPlayerBeta.exe [32]	ryanf	14624		iiBp0-7M1	Below normal*	0-7		0.39	0.73	80	Running	0:03:31.171
RobloxPlayerBeta.exe [32]	ryanf	18464		iiBp0-7M1	Below normal*	0-7		0.59	0.60	80	Running	0:02:52.750
RobloxPlayerBeta.exe [32]	ryanf	12932		iiBp0-7M1	Below normal*	0-7		0.98	0.60	80	Running	0:02:52.765
RobloxPlayerBeta.exe [32]	ryanf	5400		iiBp0-7M1	Below normal*	0-7		0.20	0.57	80	Running	0:02:43.406
RobloxPlayerBeta.exe [32]	ryanf	17736		iiBp0-7M1	Below normal*	0-7		0.78	0.58	80	Running	0:02:45.734
RobloxPlayerBeta.exe [32]	ryanf	24860		iiBp0-7M1	Below normal*	0-7		0.20	0.54	80	Running	0:02:33.609
RobloxPlayerBeta.exe [32]	ryanf	14616		iiBp0-7M1	Below normal*	0-7		0.98	0.58	80	Running	0:02:44.406
RobloxPlayerBeta.exe [32]	ryanf	13716		iiBp0-7M1	Below normal*	0-7		0.39	0.59	81	Running	0:02:46.546
RobloxPlayerBeta.exe [32]	ryanf	18516		iiBp0-7M1	Below normal*	0-7		1.37	0.66	80	Running	0:03:06.703

Right click on it.

CPU Priority -> Always -> Below normal or Idle (I use Below normal)

Next, Memory Fix

Memory Priority -> Always -> Very Low (Or something else if preferred)

Memory Priority	>	Current	>	0-7
Application Power Profile	>	Always	>	None
Limit Number of Instances	>	Below normal*		0 - Lowest
Disallow Process		Below normal*		<input checked="" type="checkbox"/> 1 - Very low

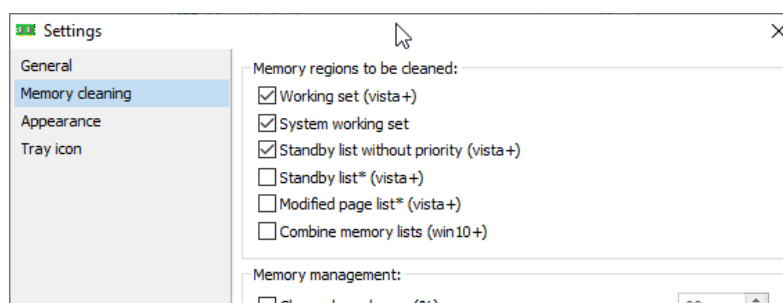

Step 2:

Mem Reduct

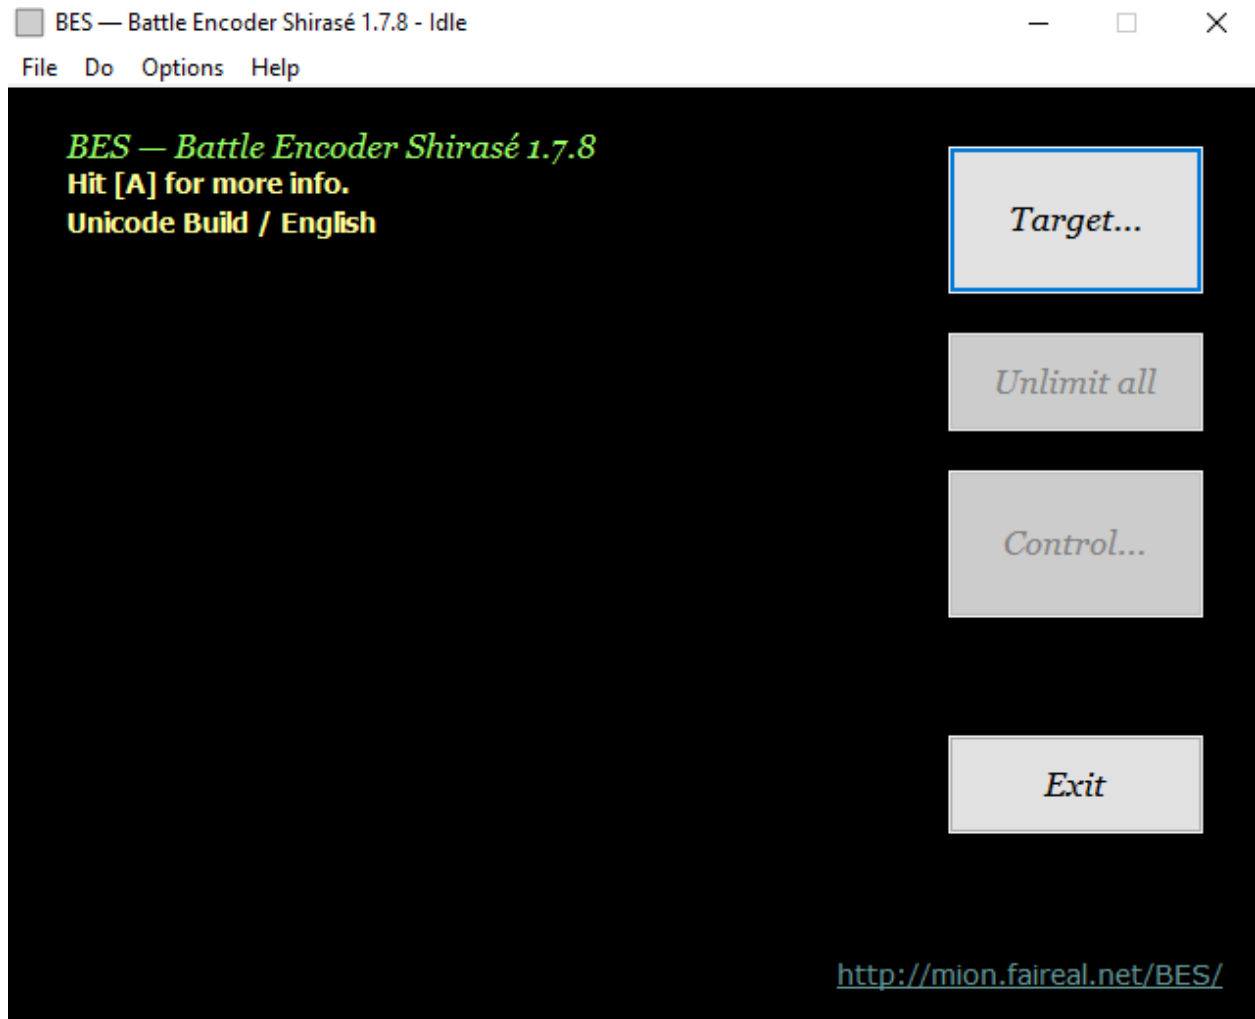

Download Mem Reduct set it up, open as admin

Have these settings, when RAM or memory usage gets high, clean memory.

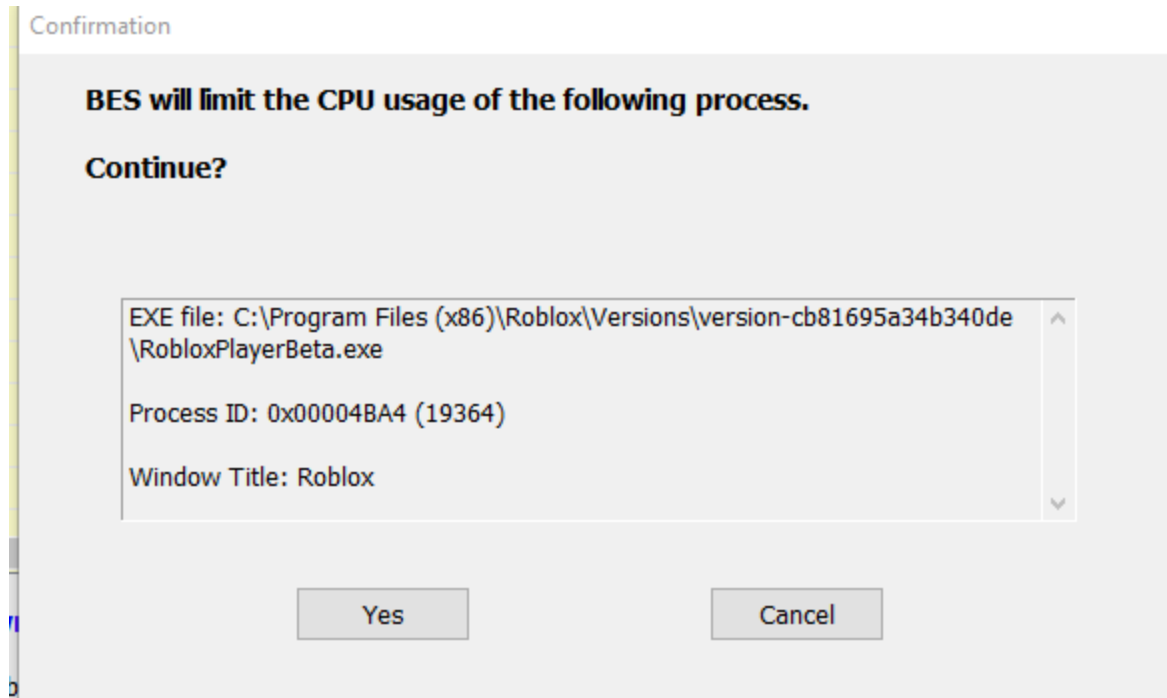

Step 3:
Battle Encoder Shirase
Download BSE.

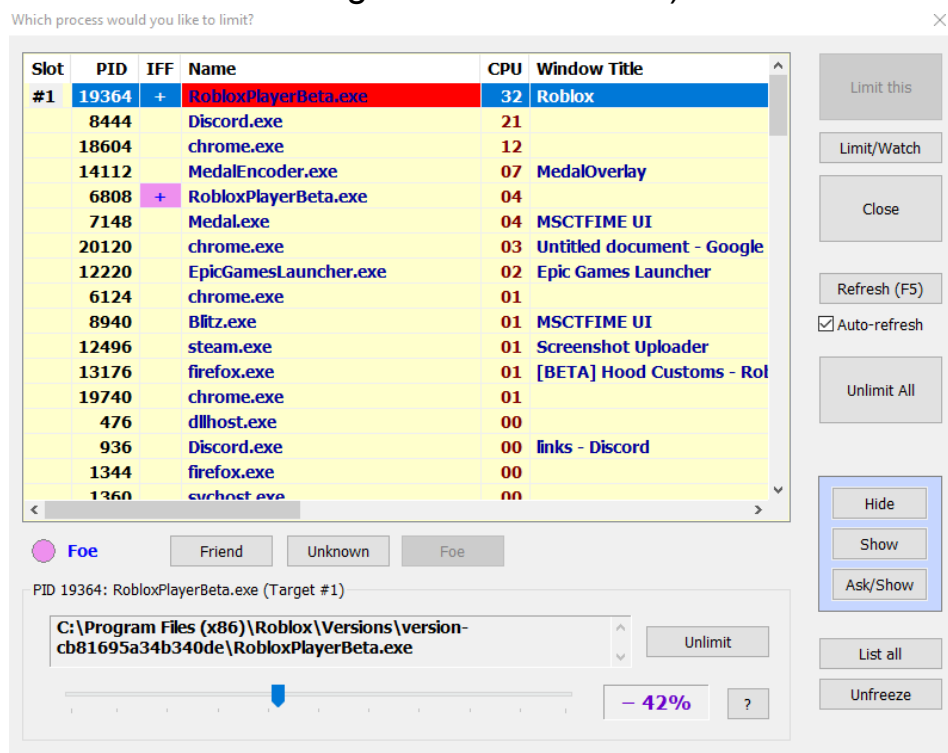

Press “Target” and look for the RobloxPlayerBeta.exe
Press “Limit this”

Hit "Yes"

Drag the slider depending on how much you want to reduce cpu usage. (I suggest you only select your alts and not main, main will have highest cpu usage so dont select it.)

You can always unlimit it by clicking the unlimit button.
