Cancellation  
Bypass  
By Tigeh**

## 1. How to clean your credit/debit card(s)

Go on incognito mode and buy some random shit with your credit card from a sketchy site. Make sure to not use your address.

Call up your bank and tell them that your card information was stolen and the payment to the sketchy site was unauthorized.

They will offer to send you a new card and will refund the sketchy charge.

Give them the address to ship the new card to and also mention that you might be moving soon and would like to change

your billing address to a different one. Simply give them any random address in your state/province.

They will send you out a brand new CLEAN credit/debit that can be used for Amazon. This card is clean as it has a new number,

cvv, expiration, and billing address. This bypasses the blacklist that Amazon had on your old credit card number, cvv, expiration, and billing address.

I recommend making multiple bank accounts and getting cards from all of them. Also getting vanilla visa GIFT CARDS is a clean payment method as well for smaller orders

CASHAPP CARD WORKS GREAT! IF YOU ARE OUTSIDE OF USA DM ME TO GET CASHAPP CARD

Now that you know how to clean a card, lets get into the method.

~~~~~

(Note: if you don't have a laptop you can simply do these steps on an android phone.)

1. Download "BlueStacks" LINK: <https://www.bluestacks.com/>

2. Fully setup the application and download this app:

[https://play.google.com/store/apps/details?id=com.lechneralexander.privatebrowser&hl=en\\_US](https://play.google.com/store/apps/details?id=com.lechneralexander.privatebrowser&hl=en_US)

3. Either purchase private residential proxies or bring your computer/phone to an internet cafe or fast food place (ANYWHERE WITH FREE WIFI)

4. Open up bluestacks and open the "Private Browser" app you downloaded.

5. Go to outlook.com, yahoo.com, or gmail.com and make a brand new email.

6. Go to Amazon.com and sign up with your new email (make sure you're on the bluestacks private browser and make sure you're

either connected to public wifi or are connected to private residential proxies. if you're on your android phone then you're already on android so you're good.)

7. Order a small item like a pack of pens (1-20\$ for in-store pickup)

Now we have a multiple of options on how to go about placing our order:

1 - Privacy Card (They have a 500 limit but you can use them unlimited times)

For this one simply put any name, billing address, etc and select a store to pickup the item.

2 - Clean Credit/Debit Card

For this fill out the fake billing address you gave to your bank and your real name, then select a store to pickup the item.

3 - Amazon gift card (You can resell it on paxful when the refund is done but will lose \$)

Put random name and everything and select a store to go pick up the item at.

8. Go pick up the 1-20\$ item you purchased and give them whatever name you used to make the order.

9. Thats it enjoy your \$20 item..... just kidding!

10. Wait 24 hours then Go back to whatever wifi network you first ordered the small item on.

11. Order a BIG order of whatever you want for in store pickup at the same store. Make sure to use the same payment method, account, wifi, etc.

12. Go pick up your big items and give them whatever name you used.

How to rinse an repeat:

Simply keep getting new clean cards, go to different wifi hotspots or use different residential proxies, keep uninstalling and reinstalling the privacy browser, switch up where you pick up your shit, keep making new accounts, etc!

\*NOTICE: If you can't pickup then you can slightly misspell your address or ship to drops. Make sure to give your bank the same slightly misspelled addy/drop.

Misspell example:

ORIGINAL :

CARL BROWN

67 Grover Ln

BOSTON MA
